

Solution Documentation

Please upload a file answering the following

Overview

Briefly describe your solution at a high level

Data Structure Choices

1. What data structures did you use to store and process the transaction data? [Describe your approach - lists? Dicts? Tuples? Something else?]
2. Why did you choose these structures? Explain your reasoning - what trade-offs did you consider?]
3. Where did you use different data structures and why? [For example: "I used a list for X because..., a dict for Y because..., tuples for Z because..."]

Data Processing

1. Describe how you processed the CSV file:
2. Did you encounter any issues or challenges with the data? If so, how did you handle them?
3. What assumptions did you make about the data?

LLM Integration

1. How did you integrate the LLM API?
2. How do you handle API responses?
3. Did you implement any optimizations or strategies to reduce API costs? If yes, describe them. If no, that's fine too just say so.

AI Tools Used

1. Did you use any AI tools (ChatGPT, Claude, Copilot, etc.)?
2. If yes, what did you use them for?
3. Did you modify or review the AI's suggestions?
4. List the sequence of your prompts.

Challenges & Learnings

1. What was the most challenging part of this assignment?
2. What would you do differently if you had more time
3. Did you learn anything new?

Testing

1. How did you test your solution?
2. What edge cases did you consider?

Additional Notes
